Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (currently amended) An optical device comprising a primary grating;

a <u>an incoherent</u> light source disposed opposing a predetermined side of the primary grating;

a first reference grating disposed between the light source and the primary grating;

a photodetector disposed opposing the predetermined side of the primary grating;

a second reference grating disposed between the photodetector and the primary grating;

wherein the primary grating, the first reference grating and the light source are configured for movement relative to one another;

wherein a period Tr of the first reference grating and a period T of the second reference grating are related to a period T_s of the primary grating by the following formula:

$$\frac{1}{T} + \frac{1}{T_r} = \frac{1}{T_s}$$

and

- 2. (original) The optical device of claim 1, wherein the primary grating is a moving grating and the first reference grating and second reference grating are fixed gratings.
- 3. (original) The optical device of claim 1, wherein the primary grating, light source, first reference grating, second reference grating and photodetector are configured as an optical position encoder device.
- 4. (original) The optical device of claim 1, wherein the grating is a reflective grating.

- 5. (original) The optical device of claim 1, wherein the first reference grating and second reference grating are configured for identical relative motion with respect to the primary grating.
- 6. (original) The optical device of claim 1, wherein the light source is a semiconductor laser.
- 7. (original) The optical device of claim 1, wherein the light source is an extended light source.
- 8. (original) The optical device of claim 7, wherein the extended light source is a light emitting diode (LED).
 - 9. (canceled).
 - 10. (currently amended) An optical position encoder device comprising: a moving grating with a period T_s;
 - a photodetector with light sensitive components;
 - a an incoherent light source disposed on the photodetector;
- a first fixed grating with spatial period T_r disposed on the light source; and at least one second fixed grating with period T disposed on the light sensitive components;

wherein the moving grating is moveable relative to the first fixed grating and the light source;

wherein a period Tr of the first reference grating and a period T of the second reference grating are related to a period T_s of the primary grating by the following formula:

$$\frac{1}{T} + \frac{1}{T_r} = \frac{1}{T_s}$$

11. (currently amended) The optical position encoder device of claim 9 claim 10, wherein the light source is an incoherent light source.

Amdt. dated December 15, 2005

Reply to Office Action of September 15, 2005

- 12. (canceled).
- 13. (original) The optical position encoder device of claim 10, wherein there is a plurality of second fixed gratings with a fixed phase relationship thereamong such that the photodetector receives only one harmonic component.
- 14. (original) The optical position encoder device of claim 13, wherein the plurality of second fixed gratings are sinusoidal fixed gratings.
 - 15. (currently amended) An optical device comprising a primary grating;

a <u>an incoherent</u> light source disposed opposing a predetermined side of the primary grating;

a first reference grating disposed between the light source and the primary grating;

a photodetector disposed on a far side of the primary grating; and
a second reference grating disposed between the photodetector and the primary
grating;

wherein the primary grating, the first reference grating and the light source are configured for movement relative to one another;

wherein a period Tr of the first reference grating and a period T of the second reference grating are related to a period T_s of the primary grating by the following formula:

$$\frac{1}{T} + \frac{1}{T_r} = \frac{1}{T_s}$$
